The beauty and excitement of your wedding cannot be captured solely with still photography. Your family and friends, their voices, their laughter and their good wishes, your music, and your memories will all come alive everytime you watch your wedding day celebration. These memories are priceless.

A photo can only capture a special moment in time, while video will capture time in motion. We capture all the beautiful sights and sounds, including the most special moment of the day, your vows. Relive your memories of your wedding day forever!

# e q u i p m e n t

We use only high-quality Panasonic and Canon "3-Chip" cameras to film weddings and we have the ability to offer a four camera shoot for a wedding that wants the best possible coverage. The use of our equipment can be seen by many professionals on popular television shows.

We also only use audiophile-grade audio equipment to capture the cleanest and most pure sounds from your wedding day. Our wireless equipment is small and unobtrusive and will not burden you on your special day.

We edit using Apple and Custom-built Computers with Final Cut Pro and the Adobe Production Suite. We take the time and care to ensure each and every DVD is perfect.
